

Mezzanine III (Alu)

Events

1

Elevated Nepturus cassette floor

2

Aluminium guardrail with safety glass and stainless steel handrail

3

Creates extra space

The Product

The Mezzanine III is a versatile Nepturus deck system which provides a complete upper level of space, galleried sections or balconies.

Design

The Mezzanine III consists of an aluminium construction with Nepturus cassette floor. The height options are 3.5 or 4.6 metres finished floor level, in widths of 5, 7.5 or 10 metres. The length of the Mezzanine is limitless and can be extended in increments of 5 metres. The maximum loading on the Mezzanine floor is 500 kg per square metre, in accordance with BS EN13782. The edges are finished with an aluminium guardrail with safety glass panels and a continuous stainless steel handrail.

Features

Adding an upper floor maximises the use of available space, creates extra room and provides elevated views. The Mezzanine III is compatible with the Evolution Products and some other Nepturus designs. Accessories include internal aluminium staircases with wooden treads.

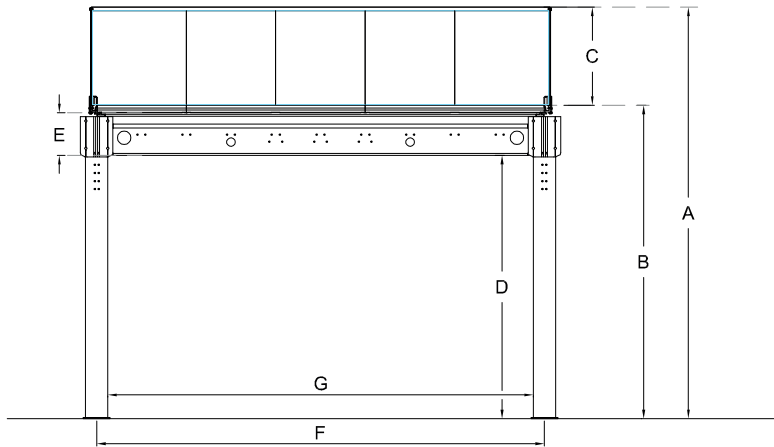

Applications

A mezzanine floor is an excellent solution for creating a VIP area, meeting area, restaurant, exhibition space or viewing area. The Mezzanine III can be equipped with internal fittings to suit your requirements.
